

RinkMusic™ RMC-1000 System

RINK INFO

RMP-1000 CONTROL PANEL

RMC-1000 MAIN SYSTEM CPU and RMT-1000 KEY TAGS
(shown with optional touch screen)

The RinkMusic™ system was developed to provide a convenient way for skaters to transport, play and control their music programs without the cumbersome task of using cassettes or CDs.

As you know, cassettes, on many occasions get damaged or are "eaten" by the cassette player. The CD, on the other hand, tends to get scratched and therefore unplayable and certainly from time to time there is no one to play the music at the arena.

With this new technology, music is stored digitally on the RinkMusic™ system. The music is given to the rink via a CD or cassette, and is uploaded. When a RinkMusic™ Key is presented to the Key Reader, the music program will be loaded for play. If another music program is currently playing, the new music program will be placed in the music queue. The skater's name will be announced alerting them that their music is about to play. This is all done automatically starting with the swipe of a RinkMusic™ Key.

Benefits

The RinkMusic™ System:

- eliminates the need for a person to play a skaters music.
- eliminates the need to provide rinkside cassette or CD players.
- provides structure for efficient use of ice time.
- provides RFID key tag sales revenue to the rink.
- can provide additional revenue to the rink each time music is uploaded.

Features

- Digital volume settings are remembered for each piece of music. This eliminates the need for constant volume adjustment between programs.
- Skaters' usage reports help identify non-paying skaters.
- Any individual skaters' music can be disabled for non-payment of ice time.
- Rugged industrial computer based digital music playback system.
